#### NOTABLE WORK

##### Nirvana Springs Ranch | Stanley, ID

Set on 40 acres within the dramatic Sawtooth Valley, the Nirvana Springs Ranch, seeks to restore formerly ranched cattle land to a pre-grazed condition, while providing the owner with a set of new outdoor amenities. Designed to act as a family gathering place, a series of rustic cabins have been sited on the ranch connected by a series trails and walkways. Blessed with a natural spring source on site, DHM has designed a series of hot and warm soak pools integrated within the natural stream channels that traverse the site. The soak pools, along with an outdoor kitchen, gathering tent, play lawn, and trio of custom shepherders wagons form the basis of the large communal south camp. All new landscape plantings are specific to the various wetland and sage communities found in the area, helping to restore the native wildlife and ecological systems on site.

DHM Design is currently advancing design and construction documentation for the entire ranch site development. Working together with the property owner and local contractors on design and engineering efforts, the project will begin construction in the spring of 2017. DHM has played a critical role in the site permitting process, working with the project team to advance water rights and Army Corps 404 permit text and support drawings.
