

## DHM DESIGN

### ALEX FALES

Senior Designer

*Throughout his life, Alex has developed an eye for representing the natural beauty in our world. After receiving his BSLA from Iowa State University in 2012, he has further pursued his interests in landscape design and self-expression. From freelance residential design and labor in Iowa to practicing permaculture in the arid climate of Utah, he has held on to his passion of facilitating the reconnection of the people to the land, which brought him to our office in Carbondale.*

## NOTABLE WORK

### Aspen Valley Ranch | Aspen, CO

DHM Design is creating a master plan for the Aspen Valley Ranch, located in the heart of the Roaring Fork Valley. The 800+ acre ranch borders the White River National Forest and has been a working ranch since the 1800's. That tradition will continue with the restoration of the historic barn, new agricultural buildings, residential buildings, pasture restoration, the design and installation of a new irrigation system, and extensive habitat environments.

### Lyle Residence | Kiev, Ukraine

This 30-acre residential complex located on the outskirts of Kiev, will be a self-sufficient family compound. Site design focuses on enhancing the existing forested environment, while providing rustic luxury, privacy and security. The schematic design includes plans for a main house, pool and spa area, observatory, pond and stream, helipad, staff quarters, and gatehouse. A display garage will showcase the client's auto collection, and an orangery will provide a year-round growing environment for perennials and citrus trees.

### Breckenridge Summer Special Uses | Breckenridge, CO

The Breckenridge Summer Special Uses project seeks to enhance on-mountain summer access and amenities for a diverse range of users. DHM worked hand-in-hand with Vail Resorts Development Company, Breckenridge mountain planning staff, the contracting team and staff of the US Forest Service to create a holistic plan that integrates multiple recreation amenities while maintaining the ecological experience of the site and supporting USFS goals for public education and interaction with the natural environment on public lands.

The overall site includes planning, design, and logistics for improvements spanning three peaks at the ski area, with improvements ranging from canopy tours, ziplines, a climbing wall and an observation tower to trailheads, interpretive nodes, primitive footpaths and singletrack mountain bike trails. Using the Record of Decision of the NEPA process, the team developed construction management and access plans, project staging and phasing, off-site visibility analysis, overall master plans, technical site plans, and illustrative graphics used to describe the intent of the finished improvements.
