##### Montrose Urban Revitalization

The City of Montrose identified sites that had previous contamination from hazardous materials and petroleum uses for redevelopment of several sites along the Uncompahgre River for which they pursued and won EPA grant funding through the help of our team. The City worked with the design team to provide redevelopment concepts for the Bullock Site, previously occupied by a coal-fed power plant. The vision includes converting the plant into a brewery, a river recreation equipment rental site, housing, a community center and an outdoor riverfront market. These concepts will be used by the City and design team to open dialogue with citizens, tourists and developers about local needs and future potential along the Uncompahgre River Corridor.

##### Private Residence | Aspen, CO

DHM Design is providing site planning and landscape architecture services for this new residence in Aspen, Colorado. The overall site plan is influenced by geometries created by existing trees and the natural conditions occurring on the site, such as wind direction, solar access throughout the year, and views. The overall site plan incorporates a formal zen garden, outdoor pool and grill, lounge space, and garden plantings with perimeter trails. Other design elements include sculpture siting, opportunities for art installations, and a raised vegetable garden with a custom willow trellis and recommended 6 yr crop rotation specific to the Aspen climate.

##### Civic Commons Park | Cheyenne, WY

DHM Design is working with the City of Cheyenne to design and implement the Civic Commons Park in the West Edge District. This project is part of a large scale revitalization of the area adjacent to the west of Cheyenne's central business district. The project will combine public infrastructure, parks, open gathering space, and infill development opportunities.
